A national initiative to stop inappropriate antibiotic use for asymptomatic bacteriuria in elderly patients.

**STOP**

- STOP treating asymptomatic bacteriuria; it is not an infection
- STOP testing foul-smelling, dark, or cloudy urine

**WAIT**

- WAIT and rehydrate patients who develop changes in mental status, behaviour, or function without typical urinary tract infection symptoms

**GO**

- GO to urinalysis and urine culture if typical signs and symptoms of urinary tract infection are present
